

Mohammed Eskander

IT Operations & System Administration Professional

Mobile: +966 50 2123085 | **Email:** esk.moh4@gmail.com

LinkedIn: [Mohammed Eskander](#) | **Nationality:** Yemenis | **Location:** Jeddah, KSA

Why Mohammed?

- IT & System Administration Professional helping organizations achieve uninterrupted production and seamless digital workflows by designing, deploying, and optimizing LAN/WAN networks, managing switches, routers, servers, and wireless access points, and consolidating data centers, sustaining 99.8% infrastructure uptime and ensuring system reliability.
 - Delivered 100% SLA compliance and 30% operational cost reduction by consolidating production servers to eliminate redundant cooling, upgrading ISP and security infrastructure for strengthening network stability and threat protection, and optimizing IT asset management that accelerated incident resolution, and increased employee productivity.
 - Delivered scalable, secure, and high-performance IT teams by standardizing network processes, mentoring teams, and implementing robust governance frameworks that strengthened infrastructure resilience, reduced operational risks, and enabled organizations to optimize network operations, adopt digital tools faster, and achieve strategic business objectives.
-

CORE STRENGTHS & ENABLING SKILLS

- | | | |
|---|---|--------------------------|
| ▪ IT Infrastructure Management | ▪ Git & GitHub | ▪ IT Asset Management |
| ▪ Linux Systems Administration (RHCSA-level) | ▪ SLA Management | ▪ User Access Management |
| ▪ AWS Cloud Services (EC2, S3, IAM, CloudFront) | ▪ Incident & Change Management | ▪ IT Service Delivery |
| ▪ LAN/WAN/VLAN Design & Optimization | ▪ Root Cause Analysis | ▪ Automation & Scripting |
| ▪ VMWare Virtualization / Active Directory | ▪ SaaS (Microsoft 365, Collaboration tools) | ▪ Stakeholder Management |
-

PROFESSIONAL EXPERIENCE

HCL Arabia, Jeddah, KSA

Apr 2018 – Present

Working as “**Senior IT Specialist – Proctor & Gamble Project**”

Jun 2020 – Present

Responsibilities:

- Leading the planning, deployment, and lifecycle management of network transformation projects, including infrastructure upgrades, network architecture redesign, change management, and risk mitigation.
- Managing IT service delivery for 300+ end users, overseeing incident management, root cause analysis, hardware/software provisioning, system access administration, and technical troubleshooting aligned with ITIL framework.
- Administering network monitoring, performance optimization, preventive maintenance, and infrastructure upgrades across switches, routers, servers, and endpoints to enhance network resilience and support uninterrupted plant production workflows.
- Leading full-scope decommissioning operations, executing systematic dismantling, retrieval, and handover of all IT assets and network infrastructure with zero loss, zero incident, and full chain-of-custody accountability.
- Administering IT service management by driving incident resolution, change management workflows, asset lifecycle, and real-time operational dashboards, ensuring full visibility, traceability, and governance.

Key Projects & Noticeable Achievements:

— CaaS (Connectivity-as-a-Service) Project:

- Strengthened production continuity and infrastructure resilience by contributing to the upgrading and standardization of P&G's core infrastructure, restructuring cabling, switching layers, VLAN segmentation, and data center layouts.

— SD-WAN Migration Project (Viptela to Versa) Transition:

- Drove a high-stakes enterprise SD-WAN migration from Viptela to Versa, leading complex routing reconfigurations, ISP coordination, and live-environment cutover with zero operational disruptions, delivering a fault-tolerant, high-availability WAN architecture with optimized routing performance and strengthened ISP redundancy.

— Production Infrastructure Expansion & Server Relocation:

- Engineered production infrastructure expansion and MDF consolidation, deploying and configuring 6 production servers, executing a zero-downtime system relocation, optimizing hardware architecture, eliminating risk, enforcing network path redundancy, strengthening infrastructure resilience for uninterrupted real-time control system.

Worked as “Senior IT Specialist – SC Johnson Project”

Apr 2018 – Jun 2020

Responsibilities:

- Delivered enterprise IT support across multiple multinational companies including SC Johnson, Pfizer, and Unilever under HCL engagement, ensuring consistent service delivery, infrastructure reliability, and adherence to global IT standards.
- Managed incident resolution, service request fulfillment, root cause analysis, and technical troubleshooting across LAN/WAN and wireless networks to minimize operational disruptions impacting production continuity.
- Administered and maintained on-site Cisco-based network infrastructure including routers, switches, and access points.
- Managed local file servers, Active Directory environments, and user access permissions, enforcing role-based access control (RBAC), data security protocols, and compliance standards to safeguard sensitive operational and production data.
- Diagnosed and resolved LAN and WLAN connectivity issues through network performance monitoring, bandwidth optimization, and infrastructure upgrades, addressing latency, packet loss, and coverage gaps affecting digital workflows.
- Supported infrastructure reliability through configuration management, patching, and system updates across network devices and endpoints, reducing downtime risks and strengthening IT service continuity.

Noticeable Achievements:

- Reduced P1 server downtime by transforming a chaotic data center cabling setup into a structured document network.
- Optimized infrastructure governance by decommissioning outdated equipment and maintaining accurate SAP asset records, reducing maintenance overhead and supporting compliance.

HP Company, Jeddah, KSA

Dec 2014 – Apr 2018

Worked as “Desktop Support Engineer”

Responsibilities:

- Delivered enterprise IT support across multiple high-profile global clients, including Pfizer, Unilever, Wartsila, Eli Lilly, and BMS, managing complex requirements and ensuring seamless operations, security, and user satisfaction across diverse business units.
- Collaborated closely with end users to diagnose, troubleshoot, and resolve hardware, software, and network issues across multiple enterprise clients, ensuring minimal disruption to business operations and high user satisfaction.
- Administered domain controllers, Active Directory, user accounts, and permissions to enforce secure, role-based access, maintain compliance standards, and optimize authentication processes across global client systems.
- Provided technical guidance, training, and support documentation to end users, promoting effective use of IT tools, reducing repeat incidents, and improving productivity across multiple client sites.
- Monitored IT infrastructure performance, identifying recurring issues, implementing preventive measures, and collaborating with cross-functional teams to enhance system reliability and uptime.

PROFESSIONAL CERTIFICATIONS

— AWS Certified Solutions Architect – Associate	2026
— AWS Certified Cloud Practitioner	2026
— Red Hat Certified System Administrator (RHCSA) – RHEL 10	2026
— ITIL®5 Foundation Certificate	2026
— Cisco Certified Network Professional (CCNP)	2018

ACADEMIC QUALIFICATION

- **Sana’a University, KSA** (2009 – 2013)
Bachelor of Science – Network Engineering

LANGUAGE PROFICIENCY

English – Expert

Arabic – Native Speaker
